Review

There is a mobile game that has swept through the summer, it has become one of the essentials for players around the world and there are already millions of downloads in the main application stores. We are talking about **Agar.io**, an application with a very simple mechanism but that has managed to hook the public.

Its game mechanics are very easy, you start as a small point with which you will have to eat others to continue growing and to be more powerful than the rest. In the first place, its version for computer appeared, but seeing the repercussion it had, its mobile version was quickly launched

Both versions work the same, share the same design and the same gameplay. **Download Agar.io free**, you have it available for **Android** and **iOS**, and start eating and avoiding being eaten by others.

We can finally play to be the biggest ball in this colorful universe on our mobile devices. The main fun does not lie in eating all your rivals, yes, but in spite of looking like a very simple game, you can carry out different strategies to achieve your goal and ensure that others cannot devour us.

At first your point will be very simple, of a single color and a tiny size, but as you progress and eat, you will level up and this will allow you to get customizable ones with which to make your figure more fun and distinguishable.

Although **Agar.io** is a totally free application, within it you will find some payments, but these are customizable aspects of the point, so you will not have problems to continue enjoying it without not purchasing them.

With more than 50 million users, your games can be dizzying and frantic, think that it is a fight for the survival of your sphere, so your mission will be to do everything possible to eat and not be eaten.

To get started you just have to install it on your device and start playing, that fast. When you start your first game you will see that your circle is so small that comparing it with the other players you are tiny, so you have to be very careful because you are an easy target next to the rest of the fat spheres. At this point the important thing is to use your agility, due to its size it is your best ally.

Snake through the biggest ones and try to eat other spheres along the way. This trick will help you increase your score quickly and get to 140 or 160.

When you are already a considerable size, this trick no longer works for you, the bigger you are, the slower you become. It is for this reason that you will think more about your movements and become cautious. In each of the scenarios that are presented to us there are a series of elements that will help you in the game, get to them before any of your rivals and thus can help you hunt smaller ones.

The rest of the opponents are also players, so each game is unique and unpredictable. There are some who go head-on, devouring everything that comes their way, but there are others who prefer to be more stealthy and attack when you least expect it. Have eyes everywhere and try not to be caught by surprise.

When you reach a size between 350 and 400 points, you will already be a circle to consider and it is time to take action. Try to destroy all your rivals and reduce it so that its size is reduced to small spheres, at which point you can eat them.

To attack you can throw part of your mass against spike spheres that you will find, causing them to divide and shoot towards the other players, which when they receive the impact, they break into pieces and thus we can eat them.

Download Agar.io, you also have the option of dividing your own sphere into Agar.io, to be able to cover more space and have our enemy surrounded. But this tactic is very dangerous, because being smaller you are also more vulnerable.

✓ Pros

- It is very easy to use.
- Each game is totally different and unpredictable.
- The games are against players from all over the world.
- You can give coins to other players.

✗ Cons

- The account cannot be personalized.
- Custom objects crash.
- You cannot play games with friends.
- In fast mode it is very difficult to control.
