Description

Apex legends is essentially a real FPS battle, so in first person , where 3 teams fight for a total of 20 teams and 60 players in play. When you start a game, the news immediately begins, unlike PUBG and Fortnite, when you want to launch from the spaceship, in this case, there will be a JumpMaster, which is a leader who will decide where the whole team will be launched, you can suggest a point 'Pingando' the destiny in the map, but when the JumpMaster decides to throw itself, all the equipment will be tied to him, unless you want to select the throw in solitaire, that of course I do not recommend it. The biggest novelty of the game is surely the Legends , in fact, every time you want to start a game, you will have to select the character to play with, the combination of legends in a team will be essential to win. The first legends are available immediately, while the last two (Custic and Mirage) must be unlocked by advancing the levels and accumulating the coins of the game. Each legend has a passive ability, an intermediate skill and a maxim, we have, for example, Lifeline, who is a real doctor and his intermediate skill launches a robot capable of healing you and your companions, Bloodhound is a true hunter that with his passive skill can see the footsteps of the enemies and with intermediate skill launches a scanner to see if there is any enemy nearby. Wraith, is another very strong legend, that with its intermediate ability can become invisible to be able to reposition itself in a different place, Mirage, another very interesting legend, can launch holograms that can distract the enemies. The legends are a very interesting aspect of this game, which you can use to get a good team game, for example with Lifeline, Bloodhound and Gibraltar, each legend also has its own ' Hitbox ', that is, we have smaller legends and more difficult to guess, like Wraith and more impressive legends like Gibraltar and Caustic. The news does not end here, the

Review

Apex Legends is a free-to-play battle royale game that was developed by Respawn Entertainment and published by Electronic Arts in February 2019. The game is available for Microsoft Windows, PlayStation 4, and Xbox One.

The game was released without any prior marketing and still hit the top charts in record time. That is all due to the facts that it is completely free to play, published by one of the best game developers and has taken the format of the currently most popular games - the battle royale.

The gameplay of Apex fuses elements from a variety of video games, including Respawn's own Titanfall series, the battle royale games, class-based shooters, and those with evolving narratives. Thru this, Apex felt very natural and familiar to the public but brought a lot of cool twists to keep gamers interested.

The game begins like any battle royale - approximately sixty players are pitted against each other on an island in squads of three, with one player controlling where their squad lands. The squads then must find weapons and equipment, while the safe zone on the map gradually becomes smaller. Each time someone has a kill strike, a voice announces the new kill leader on the island.

Other announcements include when the kill leader gets killed and replaced, when the zone shrinks etc. The eerie voice gives the game a very apocalyptic, Hunger Games type of feel. Some of the more interesting features are that players can choose a specific legend to play, where each legend has a different special ability, kind of like in Overwatch - the unique abilities fall into roles such as Offense, Defense, Support and Recon.

Similar to Fortnite there are also cosmetic items, both for the legends and the weapons. They can be won by leveling up or bought with real money.

Another thing is that players can actually revive their teammates if they get to a revival station in time. There are also a lot of innovations in team communication - it can be done through voice chat or through a ping system, allowing teammates to mark supplies, locations, and enemies with ease. The game's graphics are also quite realistic and give the game a polished and more serious feel.

✓ Pros

- First person fps, for those who have always played these types of games, this is a great advantage.
- Very good graphics.
- Game based on legends and cooperation with the team.
- Is free.

✗ Cons

- Lack of modalities, such as solo or as a couple.
- The limited number of legends.
- The lack of the multiplatform, then the lack of the possibility of playing from different consoles.
- Some skins are too expensive, being very difficult to access without having to pay in exchange, no matter how well you play

Tips

1. Always play with your team
2. Use the skills of the legends to help you and your team.
3. Choose a suitable launching destination, to find good weapons and not find enemies.
4. Play with friends talking with auricolares
