### Description

---

What is Bots on Discord? Bots on Discord is a Discord bot list with two main goals: help users find bots they'll love and help bot developers grow. To help users find bots easily we focus on providing an intuitive interface that allows them to easily find information. We also hold a relatively high bar for the quality of submissions on the list. Our moderation and approval team work hard to ensure every bot has a detailed page so users don't have to waste time trying to find information. Along with our focus on users we have lots of features focusing on bot developers. We offer an advanced submission and editing page for bot entries with live previews and plenty of fields to list everything about your bot, along with a powerful markdown editor to make your page stand out. To help great bots grown our front page is designed to show the bots that people love, not the ones that restrict features behind votes. Lastly, we give bot developers access to statistics to track how their bot is performing on the site.

### Review

---

For all those fans of online videogames, one of the fundamental pieces is to be able to talk with the rest of your team to properly assemble the strategies to follow and not lose the battle due to poor communication. That is why many platforms have emerged that have tried to help in this task, although none have managed to unseat what is considered to be the Slack of gamers, the **free Discord application**.

This social platform allows you to create chat groups in which you can be commenting on different games simultaneously. It has several versions, for computer and also for mobile devices. **Download Discord for free**, you find it compatible with **Android** and **iOS**.

It is a communication tool similar to what Skype could be, but adding a series of functionalities that make it become much more than just a conversation. You can chat via text, voice or make a video call, without any limits.

Although you can use it for whatever you want, it is true that video game fans have received it with open arms, being the ones who use it the most. This is due to all the facilities that it offers them, allowing them to continue playing while talking. Chat rooms are ordered and run through

their communities they call servers. Each of them can have different channels that will be distributed among the users so that they can communicate.

The themes of each of these channels is very diverse, you can find specific games, developers or even very different topics such as hobbies or hobbies. In addition, they can be public or private, the first ones you just have to enter and start chatting with all the members who are there, while to access the closed you will need an invitation from someone who is inside. Also turning it into a type of social network where you can find other people with the same tastes as you and share experiences.

It has its own game store, in this way it explores the aspect that its users use the most and that you can find within the app itself. One of the main **advantages of Discord** is that it seeks to be as efficient as possible so as not to intervene in the game, adapting and consuming the minimum possible data, to achieve an immersive atmosphere for the players.

### ✓ Pros

---

- User-friendly Unlimited, free, voice communication Servers with versatile permission management Private DMs Ad-free Free in general

### ✗ Cons

---

- Marketed toward gamers, not exactly perfect for the work environment

### Tips

---

1. Discord has a lot of useful keybinds hidden in the settings, and you can head to Settings > Keybinds to check them out. One really useful trick is to set "Push to Mute" to your preferred in-game push-to-talk key. This way, when you talk to other people in a game, your friends in Discord won't hear you twice.
