ios

Description

As for the operation of the application itself is the simplest, and is that as with Facebook, anyone, whatever age, will not be too difficult to handle and send messages to any of your contacts, which we can incorporate from your own social network or from our personal contact list, stored on your smartphone. In the initial screen of the application we can see a list with the conversations that we have started, as well as the icons of the different accesses (friend requests, access to the camera, etc) and of course the possibility of making calls. This last option is one of the most characteristic of Facebook Messenger, and that it incorporated at the same time as WhatsApp, standing out above many other applications of this type that do not have this service. Of course, and as a negative aspect, we find advertising, which, as happens on Facebook, floods any screen again. We also find advertising of any kind, as soon as we find advertising for mortgage loans, which we do not need in any case, such as online dating applications, which we do not need either, and we are not even interested. Facebook Messenger is one of the many instant messaging applications that are available, and that we can enjoy for free. It offers us a very clean design, but at the level of options and functionalities it offers practically the same as the rest, although yes, the one that must choose or one or the other is you. Are you one of those who enjoy Facebook Messenger daily or who are inclined to other options of the many that are now available in the market?

Review

Facebook Messenger is a messaging application that was released in 2008 under the name "Facebook chat". In August 2011 Facebook messenger was nominated and this functionality was separated from the main Facebook application. Because of this division users have to download two different applications: Facebook and Facebook Messenger.

Facebook Messenger allows people who use this application to send messages to each other. You can also make calls and video calls to talk to someone else or to talk to a group of people. You can do all these things for free and the messages reach the recipient very quickly.

Some features are limited to the United States such as sending money and requesting transportation. Two years ago Facebook added a new way to share photos and videos with friends: "Messenger Day". This new modality is similar to the Instagram Stories and the photos

disappear after 24 hours. Facebook, in the same year, has also added reactions and mentions: the first allows everyone to send a message through an emoji to add a reaction, the second allows to give a notification to a particular user in a group conversation through the @ symbol.

Facebook Messenger also offers the possibility to play more than 20 mini-games alone or with a friend, but not in real time. Games range from classic games like Pac-man to new games like "Words with friend" and "Cut the rope 2".

Another positive aspect is that you can use Facebook Messenger without an account from the main Facebook application, registering instead with your phone number. In Messenger you can also talk to someone else completely anonymously: these types of conversations are called secret conversations.

In your conversations with a friend or groups of friends you can also send them pictures, voice messages, stickers and gifts. Facebook Messenger also allows you to see if your friends are using the application in real time and then if they are chatting with someone else.

Another thing, that Facebook messenger allows you to do, is to invite your contacts to install this application with a link that you can send to them through other apps like whatsapp and Instagram.

Facebook messenger doesn't take up much memory; in fact its size is 50 MB (more or less).

✓ Pros

- Its close relationship with Facebook allows us to easily access the contacts we have active on the social network
- It is completely free to download and use, something that does not happen with all applications of this type
- It has a simple and clean simple, something that not all applications of this type can boast today
- You can message unlimitedly without cost just being connected to the internet.
- You can make calls to your friends.

✗ Cons

- The resource consumption of this application is very high in some cases, reaching the point of having to remove the application from our device
- Despite having millions of users worldwide, very few actually use it actively
- It is difficult to protect your privacy
- It consumes a lot of phone battery

Tips

1. Facebook Messenger is one of the many instant messaging applications available for iOS and Android devices
2. Like many others, its download is completely free, as is its use, although of course, advertising will always be present
3. The consumption of Facebook Messenger resources is quite high, especially in mid-range or low-end mobile devices
