### Review

---

Although it may not be among the most used apps and its competition is tough and powerful, **Telegram** is undoubtedly one of the free chat apps that you should know about.

You can download **Telegram for free on Android and iOS**. It is an alternative messaging service that contains functions that allow you to send and receive messages, exchange all kinds of files, add GIFs, stickers or images to conversations, chat from your computer and much more.

Telegram differs from other programs similar to it in many ways. The first and foremost is that we are facing an open source proposal. This means that users can introduce improvements, functions and modifications that help a more efficient performance of the app. You will have access to what are known as "bots" with amazing and fun features.

In addition, another **advantage of Telegram** is its speed. It is the fastest messaging service to send and receive messages and all kinds of files. You do not have any type of limit regarding the storage or size of the chats and data transfer.

**Using Telegram** is very easy and in just a matter of seconds you will understand it perfectly. You can download it on your mobile devices or use it on computers with its efficient web service.

It is one of the safest programs available since all your messages will be encrypted with the latest and best technology. If you want no record of what you send, you can destroy the data once issued.

One of the most common ways to communicate today is through groups and with Telegram you can create groups of up to 200,000 members. Join all your followers in one channel and keep them up to date with all the latest information.

Telegram is a great alternative for those who are looking for a safe, alternative and very original messaging service. You can configure and customize the program in the way you like best among a large number of functions, tools and options. Enjoy Telegram and one of the best communities available today on the web.

#### ✓ Pros

---

#### ✗ Cons

---

- Tarefas de mensagens simples

- The contact list is based on phone numbers and requires contact permissions on mobile devices.
- End-to-end encryption is not consistent
- Few people use Telegram, so you may need to convince your friends to switch places.
- Fácil de criar grupos/canais para comunicar com os outros
- Os grupos de bate-papo podem ter um grande número de membros
- Enorme seleção de GIFs
