Viber

The most complete and secure messaging application

By Viber Media

7.4/10

android   ios

Review

Among all the social networks that exist there is a competition to be the best, that is why they do not stop updating and increasing their functionalities to become the most complete and best on the market. There are many, but only a few can say that you can use it to do anything, and among them **Viber** stands out.

With unique features, its secure environment makes your messaging and calling service a must. With it, you can connect with other people without risk and have conversations with all your friends and loved ones wherever and whenever you want, without limits. **Download Viber for free**, you find it available for **Android** and **iOS** devices.

In this app you will have the basic functions of a social network, send and receive messages in real time, send multimedia files with high quality or add GIFs and stickers that help you express everything you want to transmit without using words and with security to erase what you have regretted without a trace. With the **Viber application** you can delete any message before the other person reads it.

One of the **advantages of Viber** is the recording of video and audio in high definition, making the most of your phone, and the ability to switch from an audio conversation to a video conversation quickly and without having to cut the communication, even being able to send files in your chat while you keep talking.

What is most surprising about this free application is that with all its features you can enjoy it at no cost and that in addition to conversations with other people, you also have your own profile on their social network. **Viber** will create unlimited communities where users who have common affinities come together and even create them from scratch if you can't find one that fits you.

One of its fundamental objectives is to guarantee the security of its users' data, which is why they offer the greatest protection of your privacy so that you do not have to worry about it. They have end-to-end encryption and ensure that the information in their chats is never stored on their servers, so only the people involved in the conversation have access.

✓ **Pros**   ✗ **Cons**

- Free application for calls and messages.
- You can use it through your business.
- You can send high quality images.

- The files you share cannot be too large.
- You need a good connection to work well.
- Threat of computer viruses.
