Description

Shazam is one of the most popular applications in the world , used every month by over 100 million people to identify music, download lyrics, and now to discover the music that artists discover. Run Shazam on Apple Watch to call this song in a few seconds directly from the wrist! Shazam is a free application that helps users to understand the name of a catchy song played on the radio, television or elsewhere. Users simply hold the iPhone device under the music playback speaker, and Shazam tries to identify the album, artist and song title. Shazam stores the catalog of fingerprint audio in the database. The user marks the song for 10 seconds and the application creates an audio fingerprint. Shazam works by analyzing the captured sound and searching for a match based on the acoustic fingerprint in the database of millions of songs. Shazam (Android, iOS) Shazam is the best application to identify music and works like the charm of YouTube videos. You have to download the application on your mobile phone, but you can also use it on your computer. When the song you want to identify is played, touch and hold Shazam floating button has been downloaded over a billion times , has 150 million active users per month and is still used to identify 20 million tracks per day, says Apple. The Shazam application is currently the seventh most popular music application in the Apple store. however, Shazam does not have a dedicated Windows application. If you are using a computer running Windows, you can ask Cortana which song is playing. If you're using a Mac, you can download the Shazam versio n to your computer.

Review

Shazam is one of the most powerful applications of the tools available for mobile phones. The Apple-owned platform was born in the early 2000s and offers one of the most innovative, useful, and surprising features that a program of its kind can provide. With Shazam the user will have the possibility to easily identify any song they listen to, get the artist name, the lyrics of the song, the video and add it to their libraries or digital music players.

Shazam is free to download. Within the catalog of **free applications** we are facing one of the most efficient to add to our list of programs. Although it is owned by Apple, it is available for both iOS and Android. It is possible to obtain it in different languages, including Spanish, German, French, English, Portuguese or Chinese.

The application that was born in 2002 and worked through the sending of text messages today has an immense library of songs, melodies and artists that allows it to fulfill its main function, which is to identify any piece that the person is listening to. How many times have we been out somewhere and we were surprised by a melody that we couldn't forget? Now with Shazam users will have the opportunity to press just one button and receive all the information about the song and the artist who composed it.

The operation of Shazam is intuitive, accessible and very fast. Once the user creates an account or registers a valid one (by means of identification with social network profiles), all they have to do is press the button on the main screen so that the app begins to search within their records for the song that is playing. Once the piece is located, the available information appears such as the name of the song, the artist who composed it, which disc it belongs to and the program will allow the user to hear the entire melody or play it in other apps. Shazam can be linked with Apple Music, Spotify and Google Play Music. The person will be able to save the audio file within their music libraries. In addition, you can get more artist data, watch the theme video and share everything that is discovered with other people just by pressing the share button.
If the user wants to make an exclusive collection of the songs they find through Shazam, they can do it. This is possible because the app also has the option of making a library with the files that are identified within it. In case you want to get songs similar to those identified, the tool offers a system of recommendations for themes similar to the one you are looking for.

Among the settings of the app we find one of the great and attractive **advantages of Shazam**. We refer to the Shazam Pop-Up and Auto Shazam options. With Shazam Pop-Up the person will be able to identify music while using another program. For example, if the user is watching a series or a YouTube video, they will have the possibility to press a small button with the Shazam symbol so that it saves the song that is playing in their records. On the other hand, Auto Shazam offers the possibility for the app to perform the same task of identifying songs within other programs but automatically, that is, without pressing any button.

Within the general settings, the user will have the chance to choose what appearance they want to give Shazam and they will be able to choose between Dark Theme, Light Theme or According to Energy Saving. In this same section you will have the alternative of linking your account with Spotify, probably one of the most useful advantages of the Apple-owned app.

We are facing one of the best options available in **game and application** stores. As mentioned above it is a **free app** and also does not offer integrated purchases. It can also be used offline.

Shazam is a program that demonstrates the power of technology, the internet and mobile devices. The speed with which he identifies a song within his extensive catalog is surprising. The possibility of linking it with other apps makes it one of the indispensable tools in any terminal.

✓ Pros	✗ Cons
• Extremely easy to use	• Sometimes slow
• It helps to discover new music	• You can mark the music manually by tapping or automatically using the AUTO option, which works even if you block the device or switch to the use of another application
• Works with popular devices	
• Wolny od reklam	

- You can open the music you want to use with Beats Music, Google Play Music and Spotify, and build it as a new radio station in iTunes

Tips

1. Use Shazam to detect potential hits on the edges of your format.

2. Do not rely solely on Shazam to detect potential hits.

3. Do not look at Shazam to tell which song listeners still love.
