Review

One of the great franchises and most important sagas in history reaches mobile phones through this great free app. Pokémon Go will allow you to immerse yourself in the incredible, vast and exciting universe created by Satoshi Tajiri in the late 90s.

You can **download Pokémon Go for free** on mobile phones and enjoy it on all those terminals that have **Android and iOS** operating systems. The title offers integrated purchases within the platform. The game was developed by Niantic who also created Harry Potter: Wizards Unite and Catan World Explorers for mobile.

Why should you **install Pokémon Go**? Well, if you're a fan of the franchise, you shouldn't even hesitate for a second. As we well know, and it has been proven over the years, all the video games around the universe of Ash, Pikachu and the cute extraordinary creatures are excellent and ensure hours and hours of fun. On this occasion you can transfer all that entertainment to the comfort of your mobile.

The main feature of this delivery is that it uses advanced augmented reality technology. This means that the missions that you must complete and the objectives that you will pursue will be given in your real environment. The Pokémon, gyms and confrontations will be synchronized with the scene of your neighborhood, city or region that surrounds you. This gives the game a benefit and that is that you will not be sitting without doing anything using it but you will have to have your body moving.

If you want to have the experience with other friends you can also do it. You have the opportunity to team up with another trainer to complete the mission of collecting as many Pokémon as possible.

The graphics are very well developed and maintain the traditional aesthetics of the endearing creatures. You have the challenge of trying to get more than 500 Pokémon as well as the adventures to get legendary Pokémon.

Playing Pokémon Go assures you a good number of hours of fun in which you will enter the wonderful world that has given us so many joys over the years. Once again a Pokémon game achieves success with a quality delivery.
