### Description

---

Twitter is an online information service and a social network where people communicate in some news called tweets. Another way to describe twitter and tweeting can be micro blogging. Some people use Twitter to discover interesting people and companies online, deciding to keep track of their tweets. Twitter is easy to use as a sender and recipient. You can join the community for free by creating a new account. Then you can tweet on different topics at different intervals depending on the user. Just like on Facebook, you can communicate with the world and look at various information or news from the world. The website's interface is very clear and easy to use, it can be easily and quickly learned how to use it. People send tweets for various reasons: Vanity, attention, shameless self-promotion of their websites or ordinary boredom. The vast majority of recreationally-performing microblogs is a chance to exclaim the world and enjoy how many people read your tweets. Twitter is a combination of instant messages, blogs and text messages, but with short content and a wide audience. If you feel like a writer who has something to say, twitter is a portal worth knowing, If you do not like writing, but you are interested in any celebrity, specific topic of hobby or want to know what's going on in your extended family and friends, Twitter is the only way to connect to that person or topic.

### Review

---

The number one social network to stay informed. All the news, news and last minute information can be found on **Twitter**. The platform was created by Jack Dorsey in 2006 and since then it has remained among one of the most important and influential networks in the internet world.

**Using Twitter** is very simple. In the digital stores of the systems that have Android or iOS it is a free app, or you can do it from your computer. You only need an email account to register.

By **downloading Twitter**, you will enter what is known as a "microblogging" network. The platform allows you to write and share tweets of a maximum of 280 characters, although historically at the beginning the limit was 140. You can also upload GIFs, images, videos and soon audio files.

The main characteristic of Twitter is its speed. Any event that is happening at the moment is commented on via this social network. It is very common for important events to be discussed in parallel on the platform. The method used to identify what is being talked about, and in order to join the discussion, is to apply a hashtag through the # symbol. In addition, many important public

figures such as presidents or members of governments use this social network as an official means of communication.

Users can choose how to find out what is being talked about on Twitter. It can be configured by region, depending on how many people are talking about an event or by topic. The app also has an update on sports results and live broadcasts from important news channels.

Among other **advantages of Twitter** is that you can start private or group conversations with selected accounts if you want to. The program facilitates different and effective communication channels.

If you are looking for a fun, dynamic social network that keeps you up to date with all the latest news, Twitter is undoubtedly your best option. Although it does not focus on images or videos like other platforms, it is one of the most creative, dynamic and witty spaces from which you can draw on all kinds of data.

### ✓ Pros

---

- Twitter makes personal things.
- Twitter helps keep up with trends.
- You can provide customer service on Twitter.
- Can be retweeted.

### ✗ Cons

---

- Your tweets can go unnoticed.
