

FIFA 19

Become a real soccer coach with this simulator

android

ios

Review

Soccer continues to be the king of sports around the world, its live broadcasts are followed by millions of people and all its events are eagerly awaited, counting the days until the moment they occur. All these elements create a general trend of wanting to emulate their football idols, which is why video games that simulate it are always on the top-seller lists. If there is one that has managed to make its players fall in love, that is **FIFA 19**.

Continuing in the style of the last 10 titles of the franchise, with its different game modes that will make you suffer like any real coach in your Career Mode. Get to form your perfect team and try to get the great soccer stars from all over the world. It has hooked millions of people all over the world on the different platforms for which it is available, even reaching mobile devices. **Download FIFA 19 for free**, it is compatible with **Android** and **iOS**.

This football experience that EA Sports offers us is not satisfied with this alone, it incorporates a myriad of novelties that delight its loyal players. Among them we find changes in its game system, so everything you know so far you will have to forget it and start learning to play again. Even the most professional of the game will be new to the **FIFA 19 application**.

The most veteran have long been asking for one of the great novelties that it offers us, dynamic tactics. This allows us to define how we want our team to behave, both in defense and attack, with which we can make combinations to make specific plays, such as a quick counterattack.

As in real life, **FIFA 19** footballers get tired of playing so much, so you will have to keep an eye on the rhythm of the game, make it yours and always take into account the status of each of your players. Play calmly, be patient, take advantage of the opportunities that arise and above all, enjoy each of the games you play and get to be the league champion.
