Review

The applications that allow us to make short videos every day are more fashionable, this is the case of **Biugo**, an app to create productions easily from your mobile for free. Very similar to TikTok, it is available to download both in the Google Play Store and is the fever of the moment.

With **Biugo Magic Effects Video Editor** you can create videos with your photos, adding different effects that will make your creations unique. Also edit them with their filters to improve them and totally change their appearance, become a true designer without having to be an expert and only using your mobile. You find it available for **Android** and **iOS** and you can **download it for free** in the **Google Play Store** and **App Store**.

It is constantly updated, almost daily, to continue adding new add-ons so that you never have to repeat elements in your publications, this has led to more than 200 million downloads, achieving a record in its first year.

On the main page of the application you will find different backgrounds to which to add your photographs so that you can create your own video, you can also do it with this type of file, it has some effects to add that are super interesting. With the option of creating a video with your photos you have different backgrounds, some allow you to put 2 or more photographs that you indicate when editing the format. It also has musical effects that give a professional touch to your design, for example cutting the song to your liking so that you only leave the part you like the most.

You can use one of the templates that **Biugo** offers you or create your own and save it to be able to use it on other occasions, everything you use is customizable. Once you create your video, share it through other applications on your device such as WhatsApp, send it by email or through social networks such as Facebook, etc. The most interesting thing about the application are the effects for photos or videos with magical style that it has.

This catalog of patterns are very well structured, you will find them by theme, and you have frames and design adapted to key calendar dates. To edit them you just have to choose them, press **Start Making** and add everything you want to appear and have on your phone, pressing **Replace Photo** and **Replace Music**, once you have finished your project it is as easy as giving **Make** and automatically saving it to your Photo gallery. If you want to share it, simply click on the messenger icon and that's it.

Every time you want to use a background it is necessary to download the resource, when it is finished and you have it installed it will be possible to edit the background. When it is possible to incorporate more than one image in the background you have chosen, it will be indicated to you once you have downloaded the theme and find yourself editing it. It is also very easy to add songs, when you are editing the background you have chosen, the first option is to upload the image, the second would be to put a song or part of a song as you wish.

In the visual creations we make, we will modify everything to our liking, even changing the frame rate. By clicking on Create our own content, we will capture the scene in small seconds that will then be superimposed to give a more attractive touch to the composition

But you can not only make compositions, **Biugo** has a section to see the creations of other users. We can organize it by various filters such as: proximity, popularity or that only those we follow appear to us. As in other networks, we interact with the rest of the community by liking it or leaving a comment.

There are many web pages that offer you tips to be able to mount with effects and to send it to your friends, a super interesting feature that **Biugo** has is that it is very easy to make an assembly and very fast, which makes more and more people want to install it on their mobiles.

When you just open the application, the backgrounds for the images that appear first are recommended for being the most downloaded and known. Another thing that is very positive about **Biugo** is that the videos are made very quickly, it takes less than 15 seconds to create them and then download them.

I challenge you to try this App to be able to have fun with your photos and make hilarious creations!

✓ Pros

- It's fun to use
- It is very easy to use
- There are many fun things shared by other users
- It's free

✗ Cons

- Some of the effects have been eliminated.
- You need to add more music
- Vpn problems occur
