Review

Taxify was the most advanced private transport platform of all time, being the first transport app in the world that allows paying directly from the terminal, but despite its success and having a presence in more than 30 countries and more than 150 cities, it was quickly forgotten with all the competition that arose. Now the company has renewed its image and expands its offers, we are facing the **Bolt application**.

With this application, they immerse themselves in the electric scooter market, leaving aside the exclusive use of vehicles. Although its regular users have nothing to fear, its functionality will be the same as always and the company guarantees that you will always get trips at the best price and in the shortest time. **Download Bolt for free**, you find it available for **Android** and **iOS**.

Always be on time with this app. You just have to enter it and reserve one of its scooters available in your city. Its aim is always to offer its users the best prices. Not only scooters, you can also request their usual services.

One of the **advantages of Bolt** is that you have a panic button at your disposal, so if you press it you will have a direct connection with the police in your city. This function is not only for passengers, the company's own drivers will also have access to ensure that trips are completely safe. It also has a Safety Kit, in which you will find all the information you need and a guide with traffic regulations.

You will only pay when you have made the trip, in this way you will be able to make trips quickly and cheaply. It has two different levels of service: Bolt and Bolt Executive, both are very friendly to the environment, helping to reduce pollution and traffic and achieving more sustainable cities.

To use one of **Bolt's** scooters you will only have to find the one that is closest to you from the application and unlock it with a QR code, it's that easy. You can move without limits throughout the city.
