Review

Much of our time with mobile phones is spent enjoying the best games and applications. There is a good variety of proposals, of all kinds. There are competitive, fun, simpler or more complex deliveries. But today we will tell you about one of the best alternatives to get free games on your **Android or iOS**.

If what you are looking for in addition to having fun is enhancing your abilities, knowledge, logic and math skills, you cannot miss the opportunity to **download Coolmath Games**. The app is **free to download** and brings together the features and all the best of the popular site www.coolmathgames.com

If you want to keep your mind in shape and exercise quick, agile and logical thoughts, you should **use Coolmath Games** and its large catalog of free games that are updated weekly. You will never be bored and you will always have new options to test your wits and math skills.

The options presented by the tool are adaptations of the popular games on the site that are used both by people for their personal entertainment and by educational institutes as support material. The subjects that can be trained are physics, mathematics, strategy and logic. It is a great opportunity to play and learn.

One of the **advantages of Coolmath Games** is that you will never get bored as the catalog is updated on a weekly basis. You will not be left without the opportunity to train your knowledge and develop your skills.

To make it easier, the app is divided by categories. The divisions are between: "Fun Physics", "Path Planning", "Quick Reaction" and "Drawing and Match 3". This division is added to the one made on the official website where we find categories such as: strategy, skill, numbers, logic, trivia, random or daily challenges. The website also has an alphabetical search engine, a ranking of the best ten games and a blog with useful resources related to educational games.

We are going to do a little review of which are the **best games from Coolmath Games** or at least the most popular.

"Bob The Robber To Go" is an installment in which we must apply logic to help the protagonist escape and get away with it. In "Block the Pig" our mission will be to prevent the animals from escaping by building walls. With "IQ Ball" our objective will be to solve puzzles with the fewest possible moves. We also have the classic "Checkers" in which we can face other users and with

"Parking Fury" in which we will apply all our knowledge to be able to park a car. On the other hand, "2048" will immerse us in a fun challenge of mathematical operations while "Toy Defense" offers us a classic tower defense game where we must develop a strategy to protect our base.

Both in the app and on the website we will have the possibility to create a user and register. Once this is done we can save the achievements, progress and progress that we have the more we play and learn.

If you have doubts regarding the difficulty of the games or what is the ideal age to enjoy these installments, do not make yourself any problem since the application and the website have a very good division of each proposal according to its difficulty and if they are for children or adults.

The site has a great history behind it as it began its activities in the late 90s, more precisely in 1997. The goal from the beginning was always to combine learning, mathematics and logic with fun.

Mathematics is usually one of the subjects most resisted by boys and girls in schools. The contents that have to do with numbers, logic, strategies or numerical operations, usually have resistance on the part of the students. The alternative presented by both the site and the **free Coolmath Games app** is really remarkable and an opportunity that should not be missed, neither by parents nor by educational institutions. Coolmath offers a wide variety of quality resources of all kinds.

Even if you are a mobile game user, with this tool you will find the possibility not only to have fun but also to learn and improve your math skills.

✓ Pros

- Extensive catalog
- Weekly updates
- Free registration
- Very good combination of learning and fun

✗ Cons

- The games do not have a great graphic development
- For some it may be boring
- Some games do not open or take time to load
- Not all the titles available in the app
