ios

### Review

---

The digital solution of the Governor of Buenos Aires is now available so that people's identities are directly validated by the National Registry of Persons (RENAPER), the **DNI Account** application. With it you will not need to have an account open at Banco Provincia and you can download it for free compatible for Android and iOS devices.

This free application is a measure so that people can carry out all their financial operations without even having a savings bank. With it you can do everything you would normally do in a bank, open an account, make purchases, make transfers, send money, recharge cards and even withdraw money without having a debit card, all this without time limits, 24 hours hours of the day.

**Download DNI Account**, it can be used by clients of Banco Provincia or not, if you are not with it, they offer you the possibility of opening a free account and getting a debit card with which you can withdraw your money. There are a series of requirements that you will need to meet to register, they are: be of legal age and have your identity card updated. The civic book, the green book, the passport or the Processing Document are not valid.

Banco Provincia is one of the largest banks in Argentina and one of its main objectives is to help promote the development of the Province of Buenos Aires to achieve a stronger society with which in the future to improve as a community.

To start enjoying all the **benefits of the DNI Account**, you will only have to install it on your mobile device and create a profile. For it to work you will have to make a digital record, the way you enter your ID within the application. To do this, you will place it inside the box that will appear on the screen, capturing first from the front and then the back. This operation is not possible with old identity cards, it is necessary that you have the latest version.

Once you have enabled the debit card that they send you, you can create your user profile in Banca Internacional Provincia BIP and start benefiting from all the product packages they offer you.

You will also need to take a photograph to serve as validity of your identity, one of the characteristics of the DNI Account is that it incorporates its own camera with which you only have to place the phone in front of your face and press the screen. Once you have registered these two

documents, you will be able to complete the rest of your personal data and create a password to enter the app. Once you complete all these steps to register, you can use it without any type of restriction.

The **free application** has a very simple interface so that all your procedures can be carried out without any problem. In a very intuitive way, you will have a menu on a single screen where you only click on the function you want to do. You can know the number of your new account in its menu, in the option of See your CBU, here you will also consult the branch that is closest to your location in the Banco Provincia Branches section, the first 4 digits correspond to said branch, while the rest is already the account number.

From **DNI Account** they care a lot about your security, that is why all your data is protected and they will always ask you for your confirmation for any operation you carry out, in addition to sending you a notification for each one as proof. To modify your data you can do it from the application itself, in its section of My file and accessing Update personal data, you can also check your balance up to the last 10 movements you have made.

In the event that you want to withdraw money, you can also do it, you just have to enter the Withdrawal option without a card and follow the steps that are marking you to be able to withdraw it at any ATM that is attached to Punto Efectivo with the withdrawal order . If what you want is to change the bank that you have associated with your **DNI Account**, you will have to uninstall and download it again, in the initial configuration process you will see the options to choose a different savings bank.

### ✓ Pros

---

- You can do all your financial procedures.
- You do not need a bank account at Banco Provincia.
- They send you a debit card.
- You can make transfers to other banks.

### ✗ Cons

---

- The card may not arrive.
- Validation can be cumbersome due to the built-in camera.
- Cannot see proof of purchase.
- It only shows the last ten movements.
