Review

In addition to being a powerful search engine, and the most important in the world, Google provides its users with outstanding **free applications**. Tools that facilitate daily tasks such as email, calendars, large cloud storages, word processors or call and messaging services.

Google Meet is part of this package and is the program of the company founded by Larry Page and Sergey Brin that is provided to business environments or workgroups to **make free video calls**.

You can **download Google Meet for free** and have access to an agile, fast, easy-to-use and above all very secure program. It's ideal for productive online work as it supports up to 250-participant conferences.

In order to avoid leaks or bad moments related to security, the app's call codes are regularly renewed and updated so that you can make connections without third-party interference or leakage of information of any kind.

When **organizing video calls on Google Meet**, one of the advantages of the program is that you can invite members to the conference in a very simple way. Just create and share the meeting room link. Once this is done, people can connect from a computer or from the **Google Meet app for Android or iOS**. Among other benefits of the program you can share screen during a video conference. This allows you to give other participants access to presentations, documents or any file in general on which they have to work.

At the same time, you can record the meetings to review them at another time if you wish. This is very important in case you have overlapping meetings and cannot attend one or the other. After the meeting is over, the video file is automatically uploaded to your Google Drive.

Google Meet is an outstanding option to improve productivity, communication and daily work development in your work environment. Make quality, secure video calls with many available features that make communications more effective.

✓ Pros

- Sound cancellation function.
- Supports up to 250 participants.
- Free service.
- Interaction with other Google services.

✗ Cons

- You have to use a Google account
- Some problems in the operation
- The phone app needs some improvements
- It may present problems to recognize the meetings
