### Review

---

Managing a work team is now easier with a free application that will increase your productivity. We are talking about **HotSchedules**, the platform with which you can have control of all your workers, whether it is a small company, a large store or a franchise.

It is designed for all types of organizations, with a cloud platform with which to direct the activities of your employees, providing solutions and services to the world of hospitality and commerce. In this way you can plan the schedules of all of them and be able to control that they are fulfilled from the same place. **Download HotSchedules**, you find it available for **Android** and **iOS** devices.

But it is not only useful for the employer, from their account in this free application the worker can also see in a very graphic way what their different shifts will be, maintain direct contact with their managers or even request vacation permits, all from their own mobile phone.

It adapts to all possible situations, saving everything that happens in real time in its log book, adding the entry and exit of workers and the incidents that may have happened to them. This way you know what changes have occurred and you can find a quick solution.

Not only will you have the possibility of managing your employees, one of the **advantages of HotSchedules** is that it has a section where you can encourage your own team to learn. You can add any type of content, from slides to video tutorials, through normal text documents or audio files. Within this function you will control which workers are performing them and which ones are not, monitoring their activity.

This application allows you to have a direct line between the worker and the company, in a way that gives them the freedom to plan their schedules, managing to change them with other colleagues in a single click, adapting to the other aspects of each one's personal life. You will no longer need the intermediation of any person, these modifications will be made automatically from the mobile phone itself and the synchronization of the schedules will be updated at the moment, so that any change that occurs will be seen quickly on your screen, and will reach you to your device as a notification, so you don't miss a thing.

---

✓ Pros

✗ Cons

---

- Easy to use
- Improves communication
- Allows direct contact
- Productivity control
- You have to pay to use it
- It changes a lot of format
- The interface could be more modern
- Somewhat slow
