You can now create your own video movies from your mobile device. **iMovie** will help you become a true image editor with professional results. This application is very easy to use and knowing how to do it will make you a movie star.

It is one of the tools that are incorporated into our devices and the ones that we use the least, despite being one of the most versatile of all. With it, you have the opportunity to mount home videos from your phone without having to resort to specialized editing programs.

Although this version lacks some of the functionalities of the computer version, it does have the most important ones to achieve very good and quality results. **Download iMovie for free**, you find it available for **iOS** operating systems.

It is possible to record and edit a video in a short time, in 5 minutes you can have the whole process finished and only have to click Export to have the complete video on your device to share it with whoever you want. You can use your camera to record and directly pass these images to the application, or directly use the ones you already have stored in your gallery.

The first thing that you will find when you open **iMovie** will be a screen where you will have to choose if you want the videos that you already have recorded previously, Projects, which are the videos that you have already edited or the Cinema option, with the videos that you have shared with the iMovie Theater tool.

To start mounting a new one, the option to choose is Project, this option will give us total creative freedom to create your own movie. You will have endless elements that will give it a different touch, such as filters, texts or your own editing tools. It is an application that will always surprise you and that shows that software designed for mobile devices is also very powerful, dare to give it a try and enjoy all the possibilities it offers you, with high quality results and allowing you to record video and audio directly from her, having everything you need in one application.
