Review

Now you can easily conduct surveys to a specific audience, be it a class, a meeting or directly to your friends. This is what this new online tool, **Mentimeter**, allows you to do. That audience to which you have launched the question will respond through their devices and the results will be seen on the screen in real time.

It is the perfect application to interact with other people and have a record of the results, you can **download it for free** and available for **Android** and **iOS** devices. There are already more than 80 million people who use it around the world and although it is completely free to use, it also has a paid version, in which you will find many more options for your answer questions, as well as other advantages.

The way in which to use this app is through the creation of a presentation in the purest PowerPoint style, in which slides with different formats will be inserted in which they will include the questions you want to be answered. The most commonly used options are to register ideas, conduct surveys, receive questions, contests, etc.

What it uses is a presentation software with which you will create your slides easily. With **Mentimeter** you will have at your disposal all the tools you need to make fun and interactive presentations, helping you make all your events unique and memorable.

The first thing you have to do to start using it is to install it on your mobile device and register with it, you can do it through an email. It's that easy, once you have done these two steps you will have access to create your presentations, just by clicking on the blue button that appears on the board.

Once you have clicked it, a pop-up window will appear for you to name your presentation and then it will ask you to choose the type of presentation you want. In Mentimeter there are nine types of questions and six different types of pre-defined slides, so the options are almost endless. Among them are the interactive quicks from which we can choose: multiple choice, choice of image, word cloud, 100 points or Who will win? and this is just a sample, there are many more. Choose the one you want and start filling in this template, add the questions and choose the different answer options that will appear and voila, you have already created your presentation, you just have to click on Present at the top of the screen and you will automatically start interacting with whom you have selected.

Once it is published, as the creator and coordinator of the survey, you will share with your audience the code with which they can access it. Participants will have to access the web page or the application and enter it, the questions will automatically appear and they will be able to answer them, participating live. You will see the results on the shared screen and thus you will be able to compare results.

One of the **advantages of Mentimeter** is its open text function, Open ended, in which participants are allowed to add comments and texts that can be seen by the creator and the rest of the members. When the presentation is finished and the entire audience has selected their responses, from the platform itself you will share and export the results. In this way you will get a more detailed analysis, allowing you to compare them over time and thus measure the evolution of the participants.

Download Mentimeter, it has become a very important tool, not only at a professional level, but also in educational settings. As it is a free and easy-to-use application, it is an ally for teachers. With the advantage that it is not necessary to register to participate and answer the questions. With it you will know what the opinion of all the students is, a very valuable information since it will allow you to adapt the classes to them.

With it you can take your presentations to another level, in a much more dynamic and fun way, with highly visual presentations full of color and making the participants interact and become part of the presentations, all this collaboration being recorded on the platform, so it is very easy to generate reports and conclusions later.

✓ Pros

- Easy to use.
- High interaction between people.
- It has many functionalities.
- Analysis in real time.

✗ Cons

- The templates in the free version are scarce.
- May crash when creating quizzes.
- is only in English.
- The codes can send you to other surveys.
