Review

For lovers of all the secrets that our sky hides, there is an application that will be able to delight you. With **SkyView** you will have at your disposal all the stars on your own mobile device, which will become your personal space observatory.

Through the use of augmented reality technology, you will be able to see the stars in a very realistic way, achieving a unique experience and enjoying the starry night. With SkyView you will have all the constellations, planets and satellites at your fingertips. With more than 5 million downloads, it is one of the highest rated applications.

It is one of the best known and one of the most complete, this means that its more than a million users use it daily to check the changes that occur and can enjoy a visual spectacle without equal.

Download SkyView free, you find it available for **Android** and **iOS** devices.

Not only will you see the one that is currently in front of you, it has a Time Machine mode in which the change that the sky above you has undergone will be shown over time, even with the possibility of select a specific date, as well as a night mode with which it will be even easier to observe the entire sky or the option of creating your own list of favorite stars.

One of the **advantages of SkyView** is the possibility of using it without an Internet connection, since it uses the geolocation of the device on which you are using it. Once you have adjusted the camera of your mobile phone, you just have to point to the sky and thus discover the stars. You can even use it if you are under cover, it does not matter if day or night, just move your mobile and explore the space around you, or without the use of your device's camera and thus save battery.

If you find yourself in front of a constellation that interests you, you just have to click on it to see more information about it and you can know all the details about its composition, size, distance from the earth and the history it has.

✓ Pros

- Easy to use, interactive
- Works offline

✗ Cons

- Problems after updates

- Detailed and interesting information
- Augmented reality technology
- Lack of customer support in some languages
- Problems with the localization function
- It does not work well in all regions
