Review

You can already know the time that it is going to do at a certain time or place, mobile applications have helped a lot in this work, getting more and more precise in their predictions and with the ease of always carrying it with you, consult them anywhere and in any moment.

One of the most used is undoubtedly the **Climatempo application**, especially in Brazil where it is used by more than 62% of citizens. This application has become one more part of people's daily lives, through it you can organize your trips, outings or events, even know the weather forecast for future days.

You will have on your mobile device all the information you need about your city, with the exact temperature of the moment, giving this data in real time and constantly updated. **Download Climatempo for free**, you find it available for **Android** and **iOS**.

With a very visual design, with a single glance at its screen you will get the information that will help you to know the levels of pollution in the air and other indicators that can affect your health. Depending on the climate in your city, it will be different, so you will only have to consult the specific map and customize it to show everything you need.

Climatempo has a very precise meteorological service, that is why the data they show is so detailed and reliable with which, in addition, you can have specific information from more than 5,000 different municipalities, with a forecast of up to 15 days, you just have to change region and see what the weather will be like elsewhere.

Weather conditions are constantly changing, that is why guaranteeing such an accurate forecast makes it one of the favorites of millions of users, one of its advantages is that it will send you notifications at times when there may be more risk to your health, For example, in times of high cold index or when ultraviolet rays are stronger and can be harmful to our skin.

Download Climatempo, use the geolocation of your mobile device to show in detail for a specific city, with interactive maps you will have general weather information and also satellite images, risk of flooding, etc., having the possibility to configure your own alerts so that you receive notifications of all the changes that take place.

✓ Pros

- Includes health predictions.
- Customization options.
- Notification system available.
- Good interface.

✗ Cons

- Some features restricted by region.
- It may present some faults.
- Updates can alter the proper functioning.
- Geolocation has delays.
