Review

We have all played the famous board game at some time. Now you have the opportunity to play anytime, anywhere with the mobile version of the popular **Scrabble**. This version of the classic crossword has the same board, letter tiles and dictionaries that can help you.

Start a game and immerse yourself in hours of fun matching the letters that win you. It includes different game modes that will make each of the games different. **Download Scrabble for free**, you will find it available for **Android** and **iOS** devices.

You can play with your friends, your Facebook contacts or even with other players in its new function called Favorite, with which you can face people from all over the world. On its screen you will also find a chat in which you will have the opportunity to send messages to all the participants and send them funny emoticons.

When you start using the **Scrabble application**, the first thing you will have to do is overcome its Beginner Mode, in which you will play individual games against the game itself, in this way you will learn to handle it, how you have to move and what the basic rules are. As your skill level increases, you will unlock new boards that include up to 5 game modes that will make it much more dynamic. You will be able to play in a Duel format, in a one against one and with a high rate of play. The application will choose a rival of the same or similar level and in which you will have 5 turns, in a limited time, to get the best score.

It also has a series of minigames with which to challenge your mind, for example one in which you search for words that do not stop changing and destroying the ones you have already used or another in which you have to find the maximum number of high-score words that you can in a given time.

In your profile within **Scrabble** you will see all the data of your games, in this way you will have all the information of your progress and all the skills that you are acquiring. You will have in one place all your average scores and the best results you have obtained in the different game modes.

✓ Pros

- Official game

✗ Cons

- Many advertisements

- Possibility of getting personalized chips
- Various game modes
- Linking with Facebook account
- You can lose games if you are not active
- Difficulty levels problems
- Somewhat confusing interface, with too much information
